

Are you letting your employees telecommute as a result of the Sherman-Minton bridge closure?

If so, here's a free software offer that may come in handy

San Jose, CA, September 16, 2011 - The indefinite closure of the Sherman-Minton bridge over the Ohio river has officials with the Indiana Department of Transportation asking employers to let workers telecommute or work an altered schedule so fewer cars are on the road at peak times.

If this is something you're considering doing but you have concerns about whether your employees might be tempted to play hooky instead of working if you let them work from home, Ahkun USA has an easy-to-install software program that will make sure no-one's goofing off on company time – and it's free for the first 90 days of use.

Ahkun AutoDaily automatically creates PC work reports that are generated in the background and emailed automatically to designated managers at the end of each workday. The reports cover:

- Time spent using the PC
- Time spent using different applications
- Names of files and web pages accessed and subject lines of emails sent and received
- Documents printed

“We know it's a big jump for many companies to allow their employees work away from direct physical supervision,” says Ahkun US General Manager Jim Leonard. “AutoDaily will give you reassurance that your employees are doing what you're paying them to do.”

And to make that transition even easier, Ahkun is offering Indiana and Kentucky businesses a 90-day free license for AutoDaily. The offer is valid until the Sherman-Minton Bridge re-opens after the current closure. To take advantage of the offer, call toll-free 1-866-846-6779 or send an email to sales@ahkun-us.com.

Ahkun Autodaily runs under Windows 7, Vista (32-bit/64 bit version), Windows XP / 2000 (32-bit version), Windows Server 2008 / 2003 (32-bit version), Windows 2000 Server (32-bit version), and Windows Terminal Service, Citrix 4.5 or higher.

About Ahkun

Ahkun was established in 2001 by former Trend Micro executive Akira Watanabe and is a specialized professional security service provider in the Japanese market; the US office opened in the summer of 2011. The company has developed customized local solutions of leading US security software such as early anti-spyware success story PestPatrol (acquired by CA) and current offerings include both personal and corporate solutions developed in cooperation with Korean security specialists VisionPower. AutoDaily is the company's first wholly-owned software development.
